

# ROOFLOR ENTERPRISES CORPORATION

## WOOD LOGS

- These are high-quality wood from Europe that are mainly used for lodge-type houses.
- Applies an anti-corrosion and drying treatment
- Three quality inspection process; raw material inspection before processing, error inspection during processing and re-inspection of products after the processing

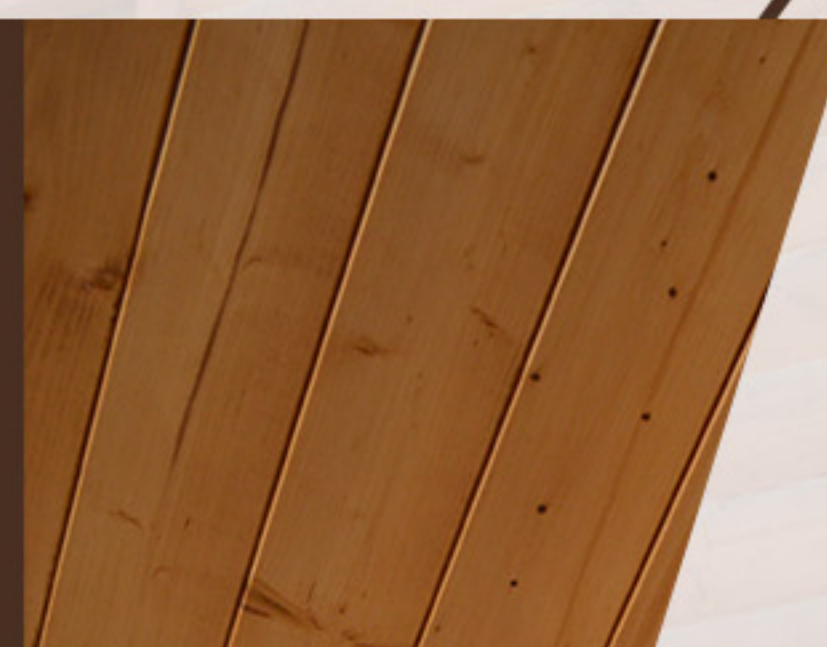

## Round Logs

This is mainly used for housing support columns and even trusses.

## Tongue & Groove

These are interlocking wood panels that can be used on walls and ceilings.

## Wall Cladding

Comes in Lap Siding and Bevel Siding. These are used for interior and exterior walls.

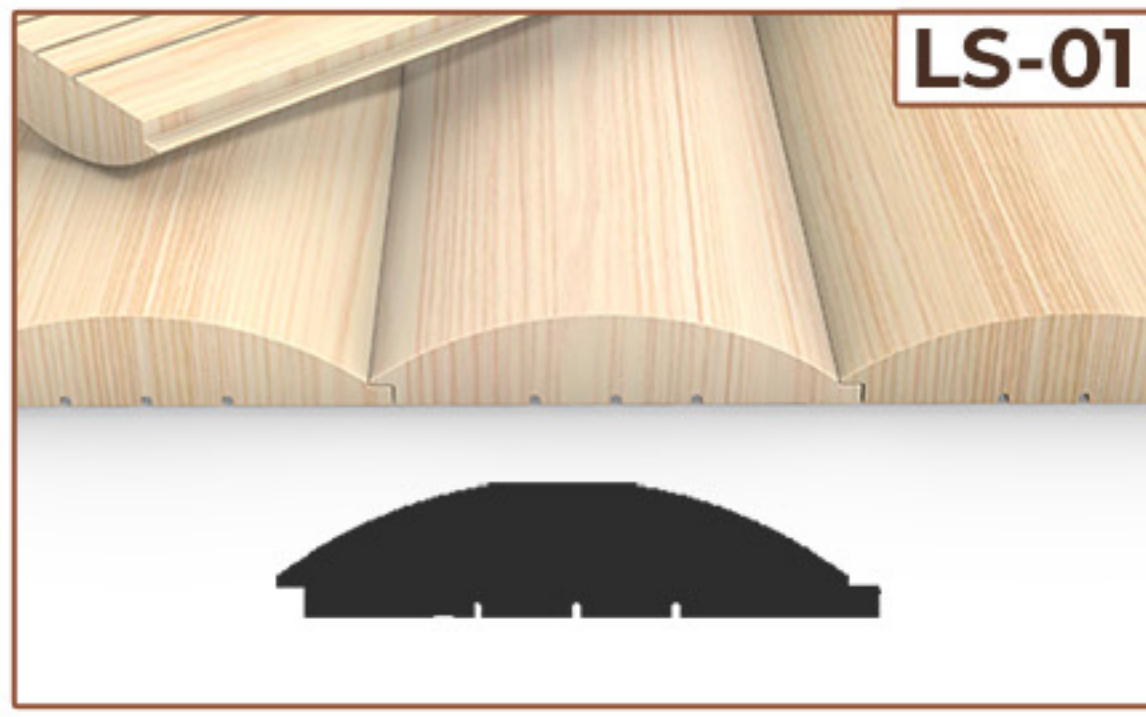

## Nailers

These are treated lumber where the wall claddings are screwed.

## LAP SIDING

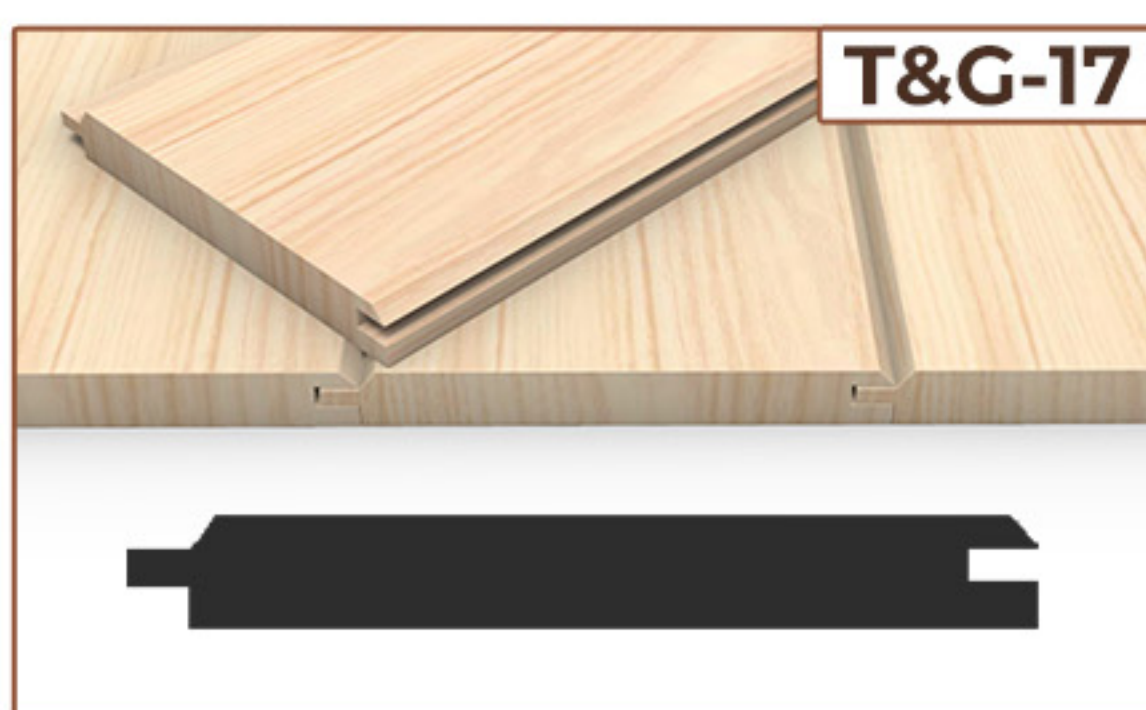

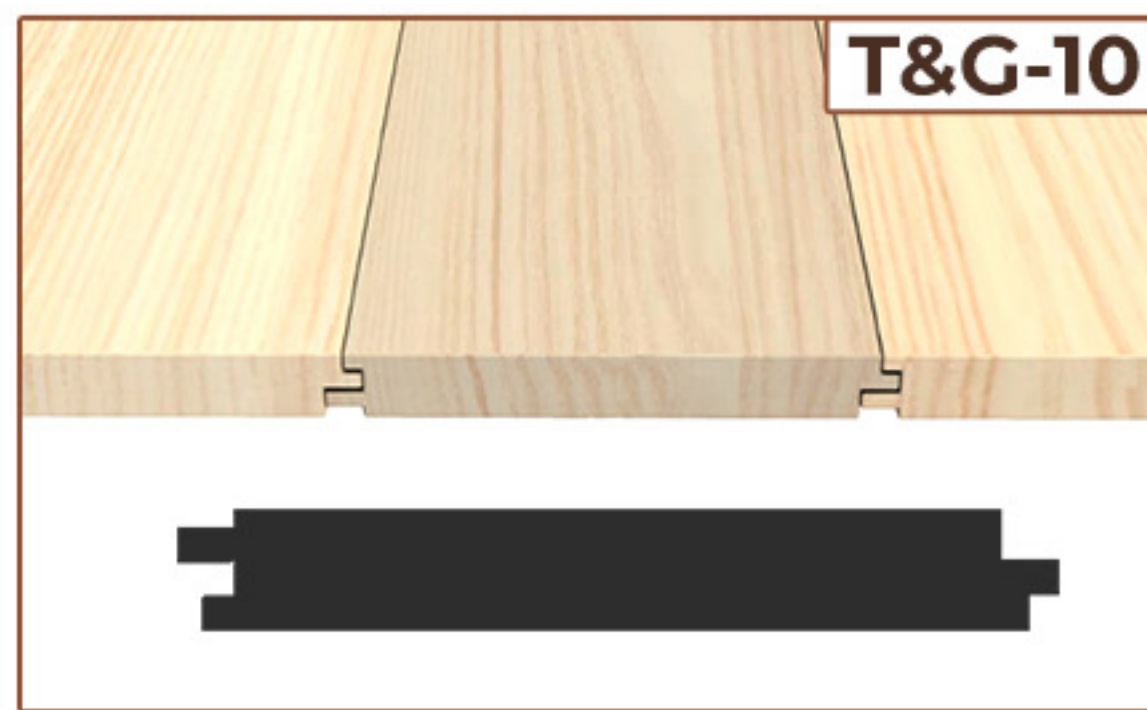

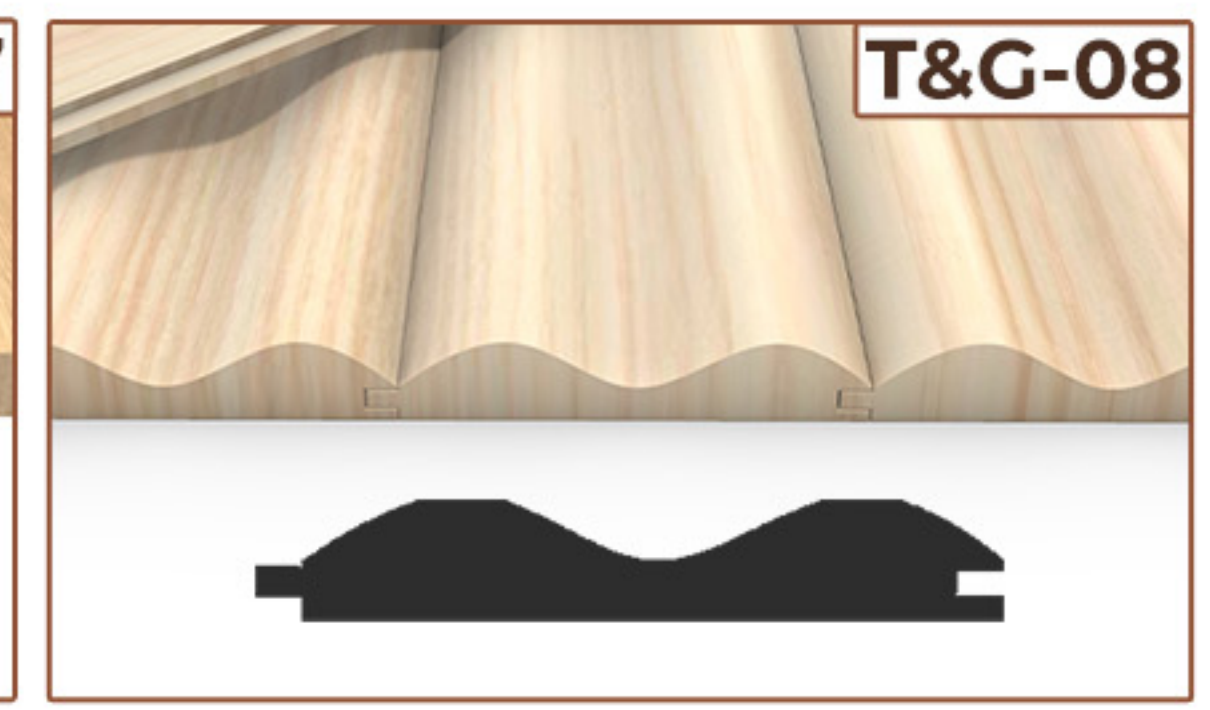

This is a versatile siding that can be installed vertically, horizontally or diagonally. In lap siding, the profile of each board partially overlaps that of the board next to it creating a channel that gives shadow line effects, provides excellent weather protection and allows for dimensional movement.

## BEVEL SIDING

This is produced by resawing lumber at an angle to produce two pieces thicker on one edge than the other.

## TONGUE AND GROOVE SIDING (T&G)

The joints between adjoining pieces are usually v-shaped or flush jointed. Reveal and radius joints are also available. The different joints and surface textures in tongue and groove siding, when combined, provides a range of shadow line effects that enhances the product's versatility.

## ROUND LOGS

## NAILERS

## MAIN WOOD PRODUCTS

RED CEDAR

WHITE PINE

PINUS SYLVESTRIS

Office and Warehouse Address: 9027 San Jose Street, Patubig, Marilao, Bulacan 3019
